

The FINGERTIP SYSTEM is designed so that farm (and other) records may be kept accurately in a simplified way in the minimum of time. It enables one to see whether he is making or losing money and on what items and how much. It shows him just where he stands.

It is not entirely the farmer's fault that many have kept few or no records, for most of us are not bookkeepers and the usual methods heretofore offered have been so complicated that they take up too much time and require an expert to keep them. That is probably why more records have not been kept. However, it is essential to keep records, both because of the various tax rulings and for your own benefit. As the years go by they will prove to be very interesting and very profitable. They show what you paid, to whom, for what, how much you sold or purchased, of the various items, and which was profitable and which was not. This will often guide you in future similar transactions.

The classification of accounts, as is provided in The FINGERTIP SYSTEM, enables you to see quickly how much you are making on your Dairy—Hogs—Poultry—Sheep—or whatever subject you are checking up and the ANNUAL INVOICE AND BUSINESS SUMMARY shows your net worth at the end of the year—what you have gained or lost—on which items—how and why the results are whatever they may be.

The Fingertip System places your year's work before you so that you can tell at a glance just how you stand, will require only about two minutes a day to keep and an hour at the end of the year to make your summary. ANYONE CAN KEEP IT ACCURATELY because of the extremely simple method used. The alphabetical file cabinet provides ample space for filing all completed cards so long as they may be needed for reference during the current year. The adding machine helps materially to eliminate errors commonly made in addition, subtraction and multiplication, is speedy, accurate and durable, with complete SIMPLE instructions for operation.

Someone has said: "Running a farm without suitable records is like owning a clock without hands. The clock may keep time, it may sound alright and may look fairly well, but the owner can tell nothing about it without the hands to point out the time of day."

There was a time when keeping records was not so necessary. That time has gone by. The farmer of THESE times should no more try farming without records than he would try plowing with oxen or reaping with a cradle, as our ancestors did. TIMES HAVE CHANGED and so have methods of doing business, and FARMING is a very complicated business, requiring the best of ability and management. Start today keeping your records on this important complicated business with The Fingertip System. IT WILL PAY.

Sincerely,

To duplicate this system or any of the supplies
